

SUT VALUE FORENSICS

Final Comparison, Issues, Gaps & Evidence Report

Case: CASE-001 — SUT May 2026 Crash

Current evidence sync: LMS-2026-10-02-001

Evidence position: Supported mechanism; initiating catalyst unresolved

1. Executive Summary

This report consolidates the final forensic report, EXP-001 experiment state, current SUT market-state evidence, and the Value Improvement Lab into one submission-ready view. The evidence supports sell-side pressure interacting with structurally shallow liquidity as an amplification mechanism. It does not establish the initiating catalyst, who sold first, or why.

The forensic report deliberately records rejected, inconclusive, and unavailable hypotheses instead of converting uncertainty into a causal claim. The current implementation preserves that boundary through separate historical, live-market, governance, and improvement layers.

2. Evidence Baseline

Area	Evidence / Finding	Status
Market move	SUT -80.6% versus BTC -1.5% and ETH -2.1% over 2026-05-16 → 2026-05-18.	OBSERVED
Price integrity	Price agrees across three independent series within approximately 1-5%.	SUPPORTED
Volume	Provider volume series conflict; no canonical volume series exists.	CONFLICT
On-chain flow	16.58M SUT moved through the traced chain; downstream fan-out measured.	OBSERVED
Direct cluster-to-pool selling	0 SUT observed from traced cluster into the main pool; router/CEX-mediated selling is not excluded.	REJECTED FOR THIS PATH
Liquidity mechanism	Shallow/fragile liquidity and depth exhaustion are supported as the amplification mechanism.	SUPPORTED
LP withdrawal	Net liquidity was positive on each crash day; LP-flight variant rejected.	REJECTED
May 2026 TVL	Never measured; later September snapshot cannot substitute.	DATA UNAVAILABLE
CEX historical depth	No public source retains the required May 2026 order-book depth.	DATA UNAVAILABLE
Initiating catalyst	Evidence standard sufficient to establish who/what initiated selling has not been met.	UNRESOLVED

3. Issue / Gap Register

Each issue is connected to evidence, current status, and the evidence needed to close the gap.

ID	Issue / Gap	Evidence	Current State	Next Evidence Needed
G-01	Liquidity / market-depth sensitivity	RUN-001/002/003; H2; OPP-01; EV-143-146	Baseline measurable; post-intervention effect unknown.	Approved threshold, approved baseline, controlled intervention, identical post-run.
G-02	Market-data coverage	LMS-2026-10-02-001: market cap, circulating supply and rank unavailable.	Public coverage incomplete.	Verified contract-addressed source + preserved raw payload/hash.
G-03	Exchange / venue access evidence	H4 inconclusive; EV-902 historical CEX depth unrecoverable.	DATA INSUFFICIENT.	Identity-verifiable venue source, spread/depth observations, timestamps.
G-04	Utility / token value capture	H7 inconclusive; H8 unavailable; no product telemetry connected.	DATA UNAVAILABLE.	Real telemetry source, metric definition, owner/retention, identity linkage.
G-05	May 2026 pool TVL	EV-901: never measured.	Cannot reconstruct from later snapshots.	Historical authoritative source if available; otherwise preserve as unavailable.
G-06	BitMart event identity	EV-900 blocked; ticker identity conflict documented.	BLOCKED / DATA UNAVAILABLE.	Contract-level identity evidence before using event as catalyst.

ID	Issue / Gap	Evidence	Current State	Next Evidence Needed
G-07	LP fee amount decoding	EV-903 decode defect; event counts valid but amounts invalid.	Correction pending.	Correct decoder and re-run with preserved provenance.
G-08	May 15–20 catalyst/news search	EV-905: search not exhaustive; Korean sources blocked to automation.	DATA UNAVAILABLE / UNRESOLVED.	Systematic multi-language event evidence with provenance.

4. EXP-001 — Current Experiment Position

EXP-001 tests market-depth sensitivity using standardised trade sizes and one fixed method. It measures market structure; it does not predict price or promise a market-cap/ranking outcome.

Metric	Observed RUN-003 Baseline	Status
\$10K Buy	+10.64% (magnitude 10.6%)	MEASURED BASELINE
\$10K Sell	-9.61% (magnitude 9.6%)	MEASURED BASELINE
\$50K Buy	+58.56% (magnitude 58.6%)	MEASURED BASELINE
\$50K Sell	-36.93% (magnitude 36.9%)	MEASURED BASELINE
\$100K Buy/Sell	NOT EXECUTABLE / NOT REGISTERABLE	NO VALUE REPORTED

Governance Gate	Current State
Business thresholds	PENDING BUSINESS REVIEW
Threshold registration	0 of 4 REGISTERED
Baseline approval	0 approved; named human review required
Intervention	NOT EXECUTED
Post-intervention measurement	DATA UNAVAILABLE
Comparison	NOT AVAILABLE
Measured result	DATA UNAVAILABLE
Final human review	NOT RECORDED

5. Proposed Thresholds — Not Approved

Working proposals: \$10K Buy $\leq$ 8%, \$10K Sell $\leq$ 8%, \$50K Buy $\leq$ 40%, and \$50K Sell $\leq$ 30%. These are PROPOSED — PENDING BUSINESS APPROVAL. They are not results and do not unlock an intervention.

6. Current SUT Market State — 2 October 2026

The latest live sync is a separate current-state evidence layer. It records what public sources returned at a stated moment and does not modify historical research or EXP-001 governance.

Metric	Current Observation	Source / Evidence State
SUT price	\$0.414076	CoinGecko — contract verified
24h change	-3.09035162%	CoinGecko — contract verified
24h volume	\$122,686.34	CoinGecko — contract verified
Total supply	238,403,731.9999999 SUT	CoinGecko — contract verified
Max supply	238,403,732 SUT	CoinGecko — contract verified
Pool liquidity	\$80,203.69	DexScreener — pair verified
Pool 24h volume	\$60,021.47	DexScreener — pair verified
On-chain spot	0.4102166 USD/SUT	Polygon RPC — contract verified
Block	94,822,584	Polygon RPC
Market cap	DATA UNAVAILABLE	CoinGecko publishes no measurement for contract
Circulating supply	DATA UNAVAILABLE	CoinGecko publishes no measurement
Market rank	DATA UNAVAILABLE	CoinGecko assigns no rank
BTC / ETH context	DATA UNAVAILABLE	CoinGecko rate-limited retrieval (HTTP 429)

7. Evidence Integrity & Traceability

LMS-2026-10-02-001 is PARTIAL: 4 of 6 configured sources responded and 13 of 22 observations carried values. Each observation preserves source identity, endpoint, observed time, retrieval time, status and evidence hash. The raw response is preserved for the run.

The identity control is contract-first: 0x98965474ecbec2f532f1f780ee37b0b05f77ca55 on Polygon. Ticker-only information is not silently merged into contract-verified data. Missing data is recorded as DATA UNAVAILABLE with the source-specific reason.

8. Value Improvement Lab — From Evidence to Action

The Value Improvement Lab is a decision-support layer: Research → Live Sync → QA/Product prototypes → Experiments → Business review. It does not approve, execute, or generate measured results.

Opportunity	Evidence Basis	Proposed Action	Status
OPP-L1 — Liquidity / market depth	H2 supported; 3 EXP-001 baselines captured.	Investigate whether increased executable depth changes standardised price impact.	BUSINESS REVIEW REQUIRED
OPP-L2 — Market transparency	Market cap / circulating supply / rank unavailable.	Investigate verified public sources for missing fields.	PROPOSED
OPP-L3 — Exchange / market access	H4 inconclusive; historical CEX depth unrecoverable.	Identify identity-verifiable venue evidence for depth/spread/access.	DATA INSUFFICIENT
OPP-L4 — Utility / value capture	No product telemetry connected; H7/H8 unresolved.	Identify measurable telemetry linking product usage and SUT activity.	DATA UNAVAILABLE

9. Evidence Required Before Any Measured Result

Gate	Required Evidence	Current
1	Business-approved numeric threshold for each standardised size.	NOT REGISTERED
2	Named human approval of a baseline run.	NOT APPROVED
3	Controlled intervention record with real evidence references.	NOT EXECUTED
4	New post-intervention measurement.	DATA UNAVAILABLE
5	Identical measurement method / fingerprint.	REQUIRED
6	Named human review of calculated comparison.	NOT RECORDED

Until these gates are genuinely satisfied, the system must not report a measured improvement. This preserves the distinction between proposal, baseline measurement, experiment result and business conclusion.

10. Week 2 Delivery — What Is Demonstrated

Delivered Capability	Evidence / State
Historical forensic layer	Frozen and preserved; mechanism supported, catalyst unresolved.
Current market-state layer	Live public-source sync with provenance and DATA UNAVAILABLE handling.
Evidence traceability	Source, endpoint, timestamps, identity and raw-response hash retained.
EXP-001	Three real baseline captures; \$100K correctly marked not executable.
Governance	Threshold, baseline, intervention, comparison and final-review gates implemented.
Value Improvement Lab	Evidence → gap → opportunity → experiment path; no decision-making bypass.
Business result	None claimed; approval/intervention/result remain pending.

11. Risks / Boundaries

- The supported liquidity mechanism explains amplification, not the initiating catalyst.
- Current liquidity is not historical May 2026 liquidity; EV-901 remains unavailable.
- Exchange-access deterioration remains inconclusive because identity and historical order-book evidence are incomplete.
- Product utility and token value capture cannot be measured without real product telemetry.
- Missing values are never replaced with zero, inference, or carry-forward data.
- Top-100 ranking is a downstream market outcome, not a direct operating KPI; no ranking improvement is claimed.

12. Submission Conclusion

Evidence: The May 2026 event has a supported amplification mechanism — sell-side pressure interacting with shallow/fragile liquidity — while the initiating catalyst remains unresolved.

Execution: The project has moved from static research into evidence-controlled current-state observation, traceability, governed experimentation and structured improvement opportunities.

Business status: EXP-001 is ready for business review but has no registered thresholds, approved baseline, intervention, post-intervention measurement or measured result.

Next evidence priorities: business decision on thresholds; verified market-data coverage; venue/access evidence; and product telemetry for utility/value capture.

Future TrustQA/Web3 QA: a future expansion direction when sufficient product, workflow, contract and production evidence becomes available; not claimed as currently implemented.
